

Professor — how to use

The company name is ObzueAI. Spell it that way. Not Abzu, not Obzue, not Obzu.
Professor is the instructor.

What Professor is

ObzueAI Professor is a multi-language instructor for presentations, seminars, colleges, schools, universities, meetings, and weddings. It teaches from materials you load into its window. It argues one claim at a time, names the level of the answer, and brings a review back when it is due.

When Professor takes over

1. Open the desk. That window is the framework.
2. Load every source for the session: a public web address, a PDF link, or a text or PDF file you choose.
3. Choose the language and the room.
4. Professor teaches from what is inside the window: the reading, the graph, the review, and your claim.

It does not reach past that window onto a locked phone, a tablet, or a computer you did not share. If you want the real pixels of this tab, use Share this tab and accept the browser prompt.

Rooms

Seminar. One claim, one objection.

University. A lecture that still checks you.

School. Plain words, same standard.

Presentation. Spoken beats from the desk.

Meeting. A decision, then the next action.

Wedding. Warm, clear, and appropriate.

A wedding room stays warm and appropriate. A seminar room presses one claim. A meeting room names a decision. The standard of accuracy does not drop.

Languages

Professor writes the reply in the language you select. Terms that must stay in the source language are glossed.

English, Español, Français, Deutsch, Português, 中文, 日本語, 한국어, العربية, हिन्दी, Italiano, Русский, Kiswahili.

The desk

- Type an https address and press Open, or use Spaced repetition or Bloom's taxonomy.
 - Back and Forward walk the pages you already opened.
 - If a site refuses to be framed, the reading underneath is still the source, and its links still navigate.
 - A YouTube address opens as video. A PDF address opens as a document.
 - Open a file takes one PDF or text file you pick. It does not see the rest of the disk.
 - Film the desk downloads a WebM of the address, the title, and the text that was actually read.
 - Share this tab asks the browser for a pixel recording. If you decline, the desk film still works.
 - Save beats downloads the step log for the session.
-

Graph, check, and review

The graph on the left is the teaching order. A concept is not taught before what it requires. Each node carries a Bloom level: remember, understand, apply, analyze, evaluate, create.

Due today is spaced repetition. Show the answer, then mark Again, Hard, Good, or Easy. Ease starts at 2.5 and never falls below 1.3. A grade below 3 resets the card to one day.

A live claim

Write one sentence you are willing to defend. Press the claim. Professor restates it, names the Bloom level it actually reaches, says what would falsify it, gives the strongest objection, and asks one question. If a page is open, the objection has to come from that excerpt.

Skills installed

- tutorial-instructor — a source becomes a lesson, a graph, and a check.
 - live-seminar — one claim, one level, one objection.
 - desk-capture — the film and the beat log of the window.
 - product-designer — the look of the room.
 - movie-producer and high-quality-video-generator — a finished film when a raw take is not enough.
 - song-studio and full-song-generator — music when a lesson needs it.
 - idea-articulation and ui-articulation — turn a vague brief into a spec.
 - register-signal — set the warmth and clarity of a text.
 - obzue-sd-drop — ObzueAI Enterprise product films. The company name in prose is ObzueAI.
 - daw-articulation-maps — expression maps for sampled instruments.
 - ghidra — headless binary analysis when a lesson is about a program.
-

Spelling

Documents, the window, the film, and the share card say ObzueAI. Older spellings with other letters are mistakes and should be corrected wherever they name the company.
